Seminar Topics:

- **The Writing Process: Organizing and Structuring Your Work**
In this seminar we'll learn strategies such as modelling, diagramming, and storyboarding to better structure and organize your written work. We'll address common obstacles that get in the way of your writing process. And, we will look at how writing is central to the ongoing development of your scholarly identity.
- **Editing and Proofreading**
This session examines the different stages of the writing process with a specific focus on the revision stage. Strategies for identifying structural or mechanical problems in the writing are presented along with advice on such concerns as enhancing the flow of ideas in a document and avoiding the use of stilted or imprecise language.
- **Refining Your Grammar Skills**
This session addresses the more prominent differences between the casual tone and syntax of spoken English and the conventions of formal academic writing.
- **Summarizing Your Research into an Abstract**
They're short. We all have to write them. In this seminar we'll examine what it takes to represent your research, manuscript, thesis, dissertation, or conference paper in just a few hundred words.
- **Punctuation**
This session details the functions of different punctuation marks in academic writing, including the colon and semicolon, the apostrophe, and a special emphasis on the varied uses of commas. The session also provides guidelines on how to incorporate references to numbers in written form.
- **Writing Your Research Proposal**
A research proposal can determine your path through graduate studies, your potential funding, and your academic and professional future. In this seminar we'll look at the components that make up successful research proposals.
- **Writing Clearly and Concisely**
This session addresses common misconceptions about the language and style of 'graduate-level writing' by arguing that clarity of ideas should always be every academic's top priority.
- **Writing Your Literature Review**
This seminar examines the purpose of a literature review in proposals, manuscripts, and your thesis or dissertation. We'll look at how literature reviews justify your work, legitimate your approach, and define your scholarly identity.
- **Writing Your Thesis or Dissertation**
In this seminar we'll learn how to set writing goals, find out where to find resources to demystify the process, and gain insights into the expectations of supervisors and committees. This seminar also addresses how to be active (instead of reactive) and take ownership of your work.
- **Getting Published**
This seminar begins by unpacking the peer review process. We'll address how to write to your target publication, how to incorporate citations in a manuscript, the "so what?" question, and the merits of writing for audiences beyond your discipline.
